

GAIN Data Portal

Save costs, eliminate waste and take control of your vendor data

GAIN Data Portal is dedicated to the efficient and compliant sourcing of market and reference data from popular data providers. This award-winning application executes pre-defined data feed requests, stores the acquired data in a central repository, and then makes that data accessible to the systems and users that need it.

GAIN Data Portal is the pre-packaged solution for achieving the cost saving strategies identified with GAIN Data Cost Analytics, AIM Software's data cost monitoring application. Customers using GAIN Data Portal are typically able to reduce their data spend by approximately 20% or more.

EASY, COMPLIANT ACCESS

GAIN Data Portal facilitates the efficient and compliant sourcing of market and reference data from multiple vendors. It includes all of the monitoring and reporting functionality of GAIN Data Cost Analytics, and much more besides.

By centralizing all data requests from one or multiple data feeds, GAIN Data Portal enables business users and applications to access data that has already been requested in a compliant way, and without incurring additional costs.

The system also ensures that new data requests can only be triggered by an authorized user.

Firms using GAIN Data Portal have complete transparency into their data costs and usage at an account, business unit, and organizational level.

Furthermore, cost savings are delivered immediately thanks to sourcing optimization.

GAIN Data Portal sets the foundation for a best-practice approach to data management that addresses data quality and governance, business efficiency and cost.

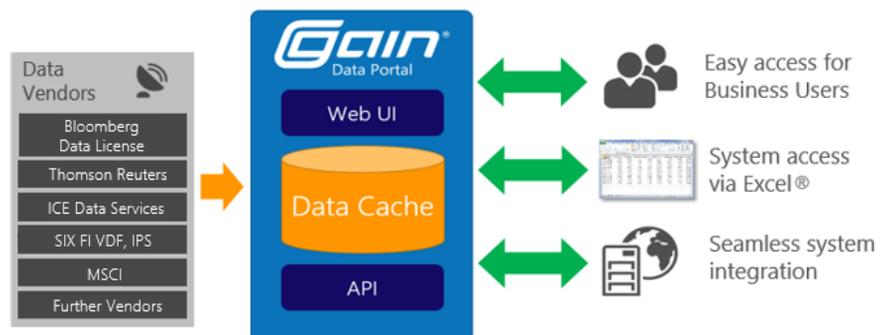

The application integrates seamlessly with the GAIN Data Management platform.

Controlled & Compliant Access to Market & Reference Data

- ✓ Centralized control over vendor data requests and usage
- ✓ Fully maintained adaptors to leading data providers
- ✓ Direct access to data from Excel® or Tableau using OData interface
- ✓ Business end-users are autonomous in accessing the data they need
- ✓ Multi-account support
- ✓ Immediate cost savings thanks to sourcing optimization

DATA USAGE UNDER CONTROL

GAIN Data Portal comes with a rich set of pre-built features that empower firms to take control of their data usage. This includes out-of-the-box connectors to leading data providers, web UI screens to manage and monitor data requests, and an API to access data from any application including Excel®.

Efficient Data Sourcing

- Centralized sourcing of market and reference data
- Users and systems can access the latest data without incurring additional costs
- Reduces multi-hits by utilizing cached and bulk data

Full Control Over Data Usage

- Data requests are managed centrally by authorized users
- Usage tracking and monitoring across vendor accounts
- Enforces data entitlements and facilitates compliant sourcing

Flexible & Faster Adoption

- Lightweight and fully productized application
- Business users are autonomous in accessing the data they need using the intuitive web UI
- Direct access within Excel® spreadsheets via OData API

Lower Ongoing Costs

- Initial savings delivered immediately through sourcing optimization
- Map data usage to invoices for transparent cost allocation
- Detailed reports provide recommendations for ongoing cost savings and usage optimization

GAIN Data Cost Analytics

Identify your potential data cost savings

Market Data Managers are under growing pressure to provide access to a wider variety of financial information services, while at the same time reducing the spend on these services. Furthermore, invoices from leading data providers can be complex, making charges difficult to understand, and future costs almost impossible to predict. What's needed is an application that centrally monitors data requests, provides a precise overview of data consumption, and helps firms to implement cost saving strategies.

GAIN Data Cost Analytics provides the transparency that Market Data Managers need to fully understand their vendor data costs and usage, as well as the insights required to identify potential cost savings.

This lightweight web application monitors and analyzes all data requests performed at an account, user, team, business unit and organizational level.

Intuitive reports and analytics provide a granular breakdown of the data requests performed by each area of your organization. These reports allow you to quickly identify inefficient data requests, and provide recommendations for achieving cost savings through usage optimization.

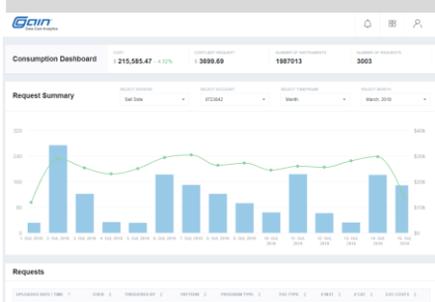

By using the insights from GAIN Data Cost Analytics to implement data cost saving strategies, customers are typically able to reduce their data spend by approximately 20% or more.

GAIN Data Cost Analytics Helps Firms to:

- ✓ Map data invoices to actual data usage
- ✓ Visualise the data request patterns for each area of the organization
- ✓ Identify the most expensive data requests and inefficient usage patterns
- ✓ Identify and eliminate duplicate requests
- ✓ Estimate future charges
- ✓ Identify potential data cost savings
- ✓ Implement ongoing cost-saving strategies

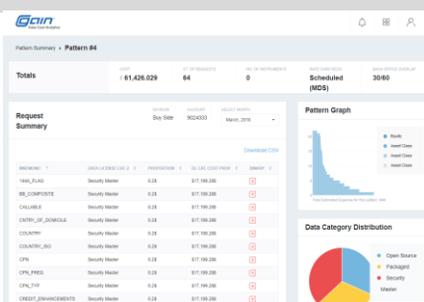

Data Cost Monitoring: Map Data Usage to Invoices

- Easily reconcile vendor invoices and verification reports with actual data usage
- Transparent cost allocation across business units, users, teams and locations
- Achieve future data cost estimations based on historical data usage and cost

Track Usage Patterns: Intuitive Reports & Analytics

- Centralized usage tracking and monitoring across multiple vendor accounts
- Quickly identify inefficient data request patterns
- Detailed analysis reports with recommendations for future cost savings and usage optimization

Cost Optimization: Identify Potential Savings

- Reduce the number of unnecessary requests by using bulk and cached data
- Optimize ad-hoc and scheduled data requests to maximize cost savings
- Leverage alternative data providers where possible
